

WordPress Internship

Week 02 - Day 1 Report

Intern Name : Sanduni Basnayaka

Date : 03 / 12 / 2025

Task : VunoVista Wines - Demo Website

Link : VunoVista Wines website

1. Objective

Today my task was to design and build a wine store website called **VunoVista Wines** using WordPress. I had to create the layout on my own without using any pre-made templates.

2. Work Completed

- Designed the **Home Page** fully using **Elementor**.
- Created a clean, modern look with animations to make the page more attractive.
- Built a custom **Header** and **Footer** using plugins and YouTube guidance.
- Installed and used the following plugins:
 - ✓ Elementor
 - ✓ ElementsKit Lite
 - ✓ Jeg Kit for Elementor

3. Challenges Faced

This was my first time using these plugins to build a custom header and footer. I faced an issue where I could not properly link the created header and footer to the pages. I am still learning how to manage plugin settings and template assignments.

4. Learning Outcomes

- Learned how to design a website layout from scratch using Elementor.
- Learned how to create custom headers and footers.
- Improved understanding of page structure, plugin usage, and animations.
- Understood the importance of template linking and display conditions.

5. Summary

Today I designed the home page of the VunoVista Wines website using Elementor and learned how to create custom headers and footers with plugins. Even though I faced issues linking the header and footer to the pages, I gained good experience in using new tools, animations, and designing a layout from scratch. Overall, it was a productive learning day.
